

GitHub Repository Creation:

- Navigate to GitHub.
- Click on "New" to create a new repository.
- Fill in the repository name, description, and other necessary details.
- Click on "Create repository."

Project Setup:

- Clone the repository to your local machine.
- Create folders for documentation, source code, tests, etc.
- Initialize a README.md file to provide an overview of the project.
- Commit changes and push to the remote repository.

Define Task Topic: Planning

- Go to the "Projects" tab in the repository.
- Click on "New project" and name it "Planning."
- Add a description outlining the purpose of the planning stage.
- Create columns for "To Do," "In Progress," and "Done."

Define Tasks within Planning Topic:

- Task 1: Define project requirements and goals.
 - Description: Collaboratively discuss and document project objectives, target audience, and desired features.
 - Assignees: All team members.
 - Due Date: [Insert Due Date]
- Task 2: Identify key features and functionalities.
 - Description: Brainstorm essential gameplay mechanics, user interactions, and additional features.
 - Assignees: All team members.
 - Due Date: [Insert Due Date]
- Task 3: Establish project timeline and milestones.
 - Description: Create a detailed timeline with achievable milestones for project development.
 - Assignees: Project Manager.
 - Due Date: [Insert Due Date]
- Task 4: Allocate tasks to team members.
 - Description: Divide project responsibilities among team members based on their skills and expertise.
 - Assignees: Project Manager.
 - Due Date: [Insert Due Date]
